Web Programming with HTML5, CSS, and JavaScript/First Edition

John Dean

Implement a web page that generates a recipe for root beer float.

Provide a group of checkboxes for different ice cream flavors. Provide a group of radio buttons for different root beer brands. After the button is clicked, if no ice cream flavor was selected or no root beer brand was selected, then display a dialog with an error message. Otherwise, display a root-beer-colored box with a double-line border that contains a root beer float recipe using the user's selections. See the sample session for details.

**Sample session:**
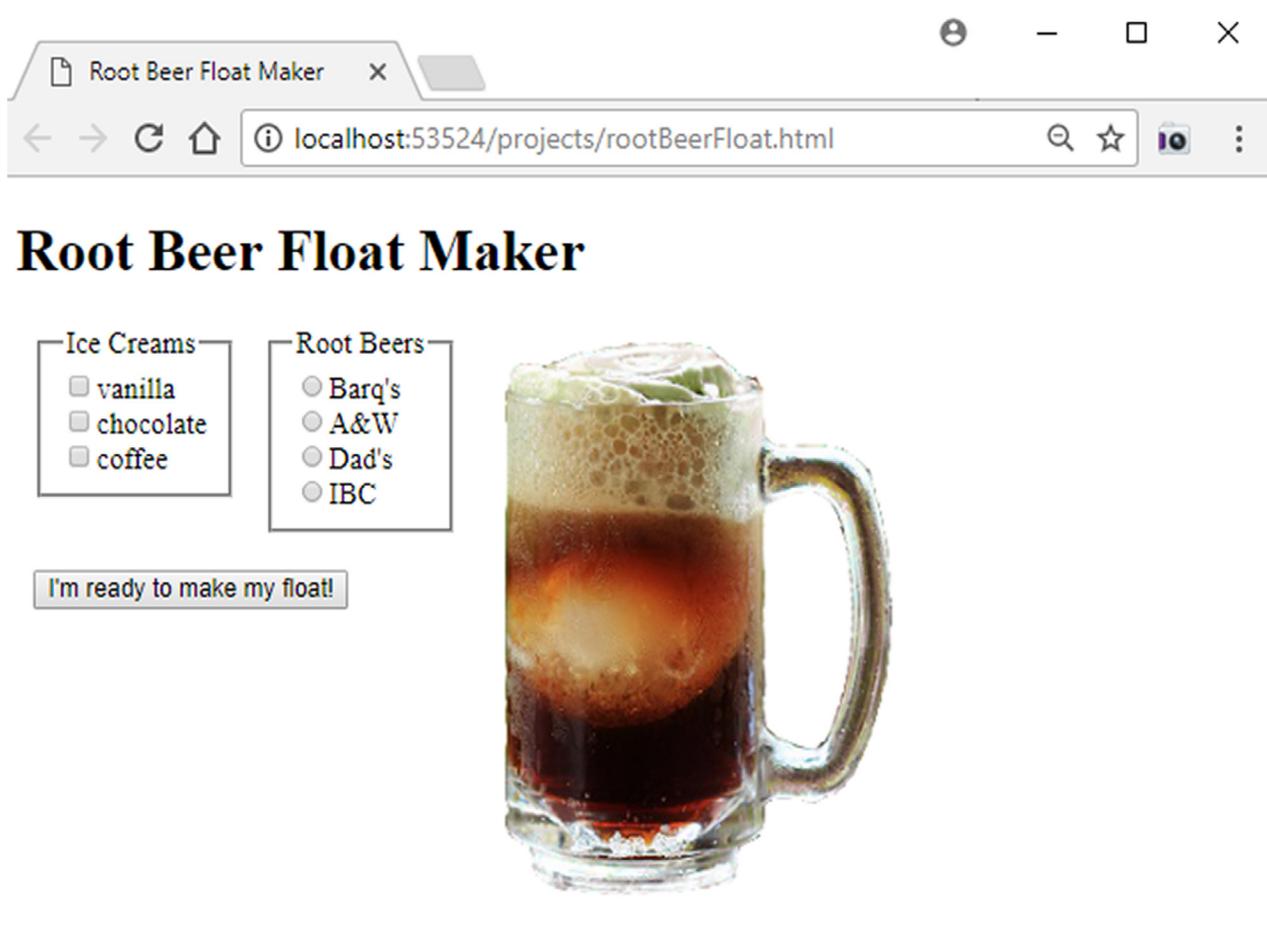

After selecting an ice cream flavor and no root beer brand, and clicking the button:
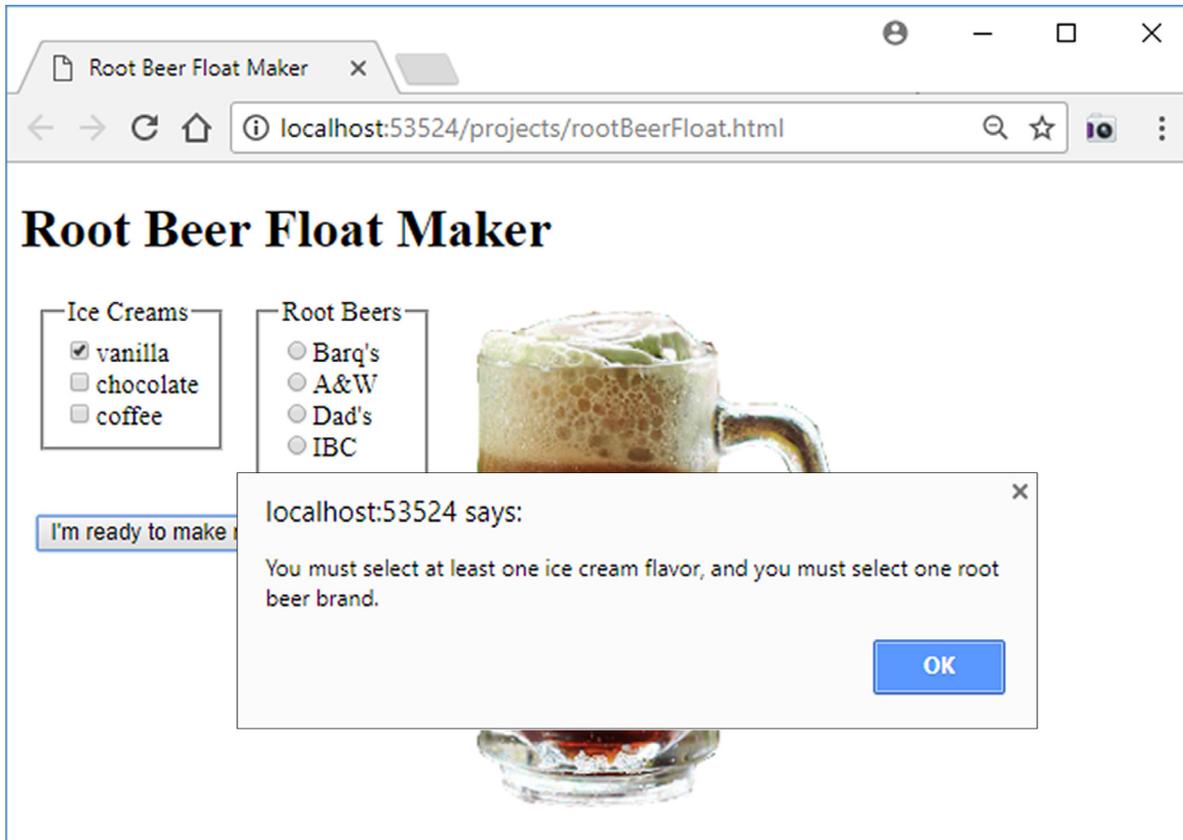

After clicking OK, selecting two ice cream flavors and a root beer brand, and clicking the button:
